

## ABSTRACT

A portable, fold-over fence panel for delineating athletic fields and controlling crowds includes a frame having a pair of vertical members and a pair of horizontal members; a panel of flexible material supported by the frame; first and second springs removably connected to the vertical members, each of said springs having a mounting spike integrally formed therewith for insertion into a soft, outdoor surface; first and second tubular feet interchangeable with said springs and suitable for supporting the frame on a hard surface; and wherein said springs allow the frame to fold over upon impact.
